

CASE STUDY

Memorial Hermann

The Business

For over 100 years, Memorial Hermann has provided the highest quality medical care to the Houston, TX area. With 13 hospitals and numerous specialty facilities, Memorial Hermann offers world-class innovations, top-quality care, and the resources of the university-affiliated teaching hospital in the Texas Medical Center.

Challenges

Healthcare institutions face unique IT challenges in today's complex regulatory environments. User provisioning is a difficult task under normal circumstances but with unique regulatory compliance needs, such as HIPAA, the problem is far more complex. Providing assurances that access to confidential client information is secure and limited to only those users who have a legitimate business need is a particularly delicate issue.

The executive IT management of Memorial Hermann made a strategic decision to modernize its IT infrastructure to address these challenges.

Our Solution

Partners Consulting's Solutions Division, (formerly CPSG) deep understanding and experience in areas of Identity, Access Management and Security ("IAM"), Segregation of Duties ("SOD"), and our expertise designing strategies for successful, regulatory compliant solutions allows us to offer a wide range of strategic consulting services.

Our Identity Roadmap is a structured, vendor neutral, comprehensive solution for clients in need of a comprehensive, multi-tiered strategy for solving IAM challenges.
